Indiana with over 25 years of experience supporting small to medium sized businesses. Founded by a CPA and Cybersecurity Evangelist, Secure ERP is dedicated to protecting our clients' data and supporting their people and growth.

3 Ways Your Employees Will Invite Hackers Into Your Network

... And What You Must Do To Prevent It TODAY

No matter how professional they are, members of your team – yourself included – are going to make mistakes. It's true of every organization on earth. They'll spill scalding coffee into the company copier. They'll work overtime until the office is empty, then head home without thinking to arm the security system. They'll neglect key accounts, muck up workflows and waste hours developing convoluted solutions to simple problems. And, worst of all, they may unknowingly bumble into the cyber-attack that forces your business to go belly-up for good.

In the majority of cases, that will be by design. There's a saying in the cyber security industry, coined by renowned cryptographer Bruce Schneier: "Only amateurs attack machines; professionals target people." When it comes to repeating the same process safely and autonomously, machines are less fallible than the average person sitting at a desk. Savvy hackers

looking to boost funds from unsuspecting small businesses know this. So instead of developing a complex program that dances around the security measures baked into sophisticated modern technology, they target the hapless folks on the other side of the screen.

The strategy works disturbingly well. According to IBM's 2018 X-Force Threat Intelligence Index, more than two-thirds of company records compromised in 2017 were due to what they call "inadvertent insiders" – employees who left the front door wide-open for the bad guys without even realizing it. Negligence, lack of awareness and sheer bad luck put the best-laid plans to shame on both sides.

But how does it happen? There are three primary causes of employee-related breaches, each of them contributing to a sizable portion of hacks across the country.

1. SOCIAL ENGINEERING

Phishing remains one of the most prominent strategies deployed by hackers to lift data from small and midsize businesses. The majority of these attacks stem from an employee clicking on a suspicious link that is embedded in a dubious or absolutely convincing e-mail. To lure your team into the trap, cybercriminals often use data gathered from cursory investigations of your organization from the Internet or social media. Maybe they pose as a security expert contracting with your company or a member of a customer support team behind one of your employees' personal devices. Whatever mask they wear, it doesn't take much to convince an uninformed individual to click on anything at all, resulting in a high success rate for phishing attacks.

2. CIRCUMVENTED OR INCORRECTLY IMPLEMENTED SECURITY MEASURES

Even if you do everything you can to protect your business from digital attack, your team may just dodge those measures anyway. According to a report by cyber security firm Dtex Systems, around 95% of companies have employees who will attempt to override previously implemented security processes. And that's if the security measures are configured, patched and installed properly in the first place. The IBM X-Force report lists "misconfigured cloud servers and networked backup incidents" among the chief concerns of last year.

"Negligence, lack of awareness and sheer bad luck put the best-laid plans to shame on both sides."

3. INSIDERS WITH MALICIOUS INTENT

Hell hath no fury like an employee scorned. A strikingly large number of breaches come not from error at all, but from insidious tactics by disgruntled employees or undercover criminals looking to make a quick buck. It's not quite a "you can't trust anyone" scenario, but there are definitely folks out there who would sell your business right out from under your nose.

With each of these in mind, it's vital that you incorporate extensive employee training and vetting protocols to maximize their cyber security know-how. In addition, you need to implement safe practices that reduce the room for human error, alert employees when something is amiss and protect them from the worst.

We can help. It's difficult to overhaul your cyber security, especially on the people side, without a round-the-clock team dedicated to pinpointing the weaknesses in your organization and working to patch them up. In 2019, human error is poised to take an even more central role on the stage of digital crime. Don't leave it up to chance.

Cyber Threats & Solutions Webinar Series

Thursday, Mar 21 @ 1pm EDT—**The Travel Edition**

Who Should Attend? C-Level executives & managers who are concerned about lost or stolen devices; privacy of confidential information; employment litigation introduced when employees use personal devices to access company data; and reputational damage along with State & Federal laws that carry heavy fines for lost or stolen customer/employee data. Of particular importance for those organizations that handle ANY sensitive data, medical records (or serve clients who have such records) or that want to avoid having their bank account wiped out due to a cyber-attack or ransomware.

When you're traveling you're at greater cyber risk than in the office.

**Register online: <https://www.secureerpinc.com/mar21web>
or call our office at (317) 290-8702.**

Our passion is your cyber protection, worry free tech is what we deliver.

Cyber Security TIPS

Cyber Protection TOP 10

First Financial Bank Annual Summit:
CYBER SECURITY
2019

Compiled from our First Financial Bank Summit last month, here's a consensus from the panel:

1. Have a cybersecurity response plan.
2. Conduct security risk assessments and vulnerability assessments.
3. Implement a true Business Continuity (backup and data recovery) system.
4. Manage your network.
5. Know your vendors.
6. Know the importance of password management.
7. Have employment policies and training related to security awareness.
8. Remove no longer supported devices/operating systems.
9. Close the door to digital break-ins.
10. Purchase cyber security insurance.

These are shorthand, but we can explain the full list. Just contact our office at (317) 290-8702 or email [rrusch@secureerpinc.com](mailto:rusch@secureerpinc.com)

Still Not The Person You Always Wanted To Be? 3 Steps To Get You There In 2019

We all aspire to be better people, but too many of us hesitate to roll up our sleeves and tackle the roadblocks that prevent us from achieving that goal. We stay in our comfort zones, fall back on old habits and then question why our life isn't improving.

When I'm coaching CEOs and they tell me they're stuck in a rut, I always have the same response: start changing what you are doing in your life, because the person you are today will not get you to where you want to be.

Here are three guidelines to do exactly that.

1. START BY GETTING FOCUSED.

When planning any journey, the first thing you need to know is where you are. In business, you hold monthly and quarterly meetings to review operations and financial statements so you know how the company is doing. You should be doing the same thing for yourself.

Then you need to figure out where you want to go. What do you want your life to look like one, two or three years down the road? Map out specific goals to achieve this, and then follow them religiously. Stay on task, but don't multitask. Limit your distractions, and control your time.

2. WRITTEN, MEASURABLE GOALS ARE A MUST.

The first and most important step toward achieving and exceeding your goals is to write them down. I cannot stress this enough. Writing down your goals and priorities serves as a reminder of what you need to accomplish. As much as you can, keep them SMART: specific, measurable, attainable, relevant, and time-bound. Carry your list around with you and act

on it every day. Do it for 30 days, and you'll be amazed at your progress.

3. LAY A FOUNDATION FOR EXECUTION EXCELLENCE.

If you've ever played sports, you are probably familiar with the phrases "in the zone" or "in the flow." It applies to any profession, from songwriting and acting to computer programming and engineering. When you're in the flow, you feel good, have a ton of energy and get a lot of work accomplished. Find the things you need to do on a daily basis to stay in the flow - whether that's exercise, meditating, reading or anything else - and write them down.

It's also essential that you hold yourself accountable along this path. Find an accountability partner and share with them your tasks, priorities and deadlines to accomplish your goals. You are much more likely to succeed when you have someone watching your progress and ensuring you cross the finish line.

Andy Bailey is the founder, CEO and lead business coach at Petra, an organization dedicated to helping business owners across the world achieve levels of success they never thought possible. With personal experience founding an Inc. 500 multimillion-dollar company that he then sold and exited, Bailey founded Petra to pass on the principles and practices he learned along the way. As his clients can attest, he can cut through organizational BS faster than a hot knife through butter.

4 Steps To Protect Your Business After The Marriott Data Breach

Last November, Marriott announced some bad news: the data of up to 500 million customers may have been compromised in an attack. If you travel regularly for business and are a customer of the Marriott chain -including Westin, Sheraton, the Luxury Collection, Four Points, W Hotels, St. Regis, Aloft, Element, Tribute Portfolio and Design Hotels - there are some things you need to do.

First, change your passcodes. This should include your potentially compromised account and any accounts that, for some reason, still use the same login or passcode in 2019. Then, start keeping a close eye on your credit card and bank accounts. You may even want to consider freezing your credit. Finally, be very careful about opening e-mails. Cybercriminals love piggybacking on actual customer contacts from big

corporations to send out phishing e-mails. *SmallBusinessTrends.com, 12/13/2018*

3 Ways To Turn Your Culture Into A Competitive Advantage

It's easy to focus on metrics like profit and market share when you're working to succeed. But when you fixate on these numbers instead of the people in your organization, folks start to feel like nothing more than cogs in the machine.

According to a recent study by FTSE Russell, all the companies that have received the prestigious "FORTUNE 100 Best Companies to Work For" have a single thing in common: keeping employee experience at the top of their list of priorities. These companies have stock market returns up to triple than the market average and lower turnover rates than their competitors.

But what does turning your organization into one where "employees come first" actually look like? The first step in this massive undertaking is to pick a "champion" who understands the goals of the project and the value of their team. Then, they can begin to assess where the problems are in areas like your mission, transparency, trust, communication and core values.

Soon they'll enlist the team on the project, creating regular rituals that reinforce your budding company culture. After a firm, long-term commitment to a new culture, you'll find your company, and the people who drive it, to be healthier than ever. *Inc.com, 12/2/2018*

Scanning Documents Has Never Been Easier – Here's How

Apple's iOS 11 app is full of exciting new tricks, but the most useful one is a little buried and definitely a lot less glamorous than most: the document scanner inside the Notes app. You no longer need to use a third-party app to upload your documents; you can do it inside Apple's excellent internal solution.

Just open up Notes, hit the "+" symbol above the keyboard, and tap "Scan Document." Then all you need to do is select your settings, point it at whatever document you're trying to digitize and it'll do the rest. It'll optimize the picture as a scan and make the document as readable as possible. *TheVerge.com, 8/26/2018*
