

3CX VoIP Breach

There's a new cyber security threat targeting the 3CX VoIP telephony platform. We believe this comes from North Korea, and it's important to take necessary precautions to protect your business.

The malware is difficult to detect using traditional security tools. This attack can harm your business by stealing sensitive data, disrupting your operations, and causing financial loss. We have solutions that can help you detect, prevent, and mitigate this attack.

Call us for a quick 10-minute conversation, we can help. - R²

April 2023

Too many businesses are exposed and vulnerable to cyber attacks. With a unique Guardian Angel Protection solution, our clients get back to their business and sleep better knowing their data is secure

What Compliance Standards Does Your Business Need To Maintain? Understanding HIPAA, NIST And CMMC

Compliance standards are some of the most important things a business needs to maintain to be profitable and well-respected while staying out of legal trouble. Failure to meet these standards will make your business susceptible to fines and legal action. You'll also take a hit on your reputation as customers, vendors and competitors may find your business to be untrustworthy. By enforcing compliance, you're working to promote ethical behavior while protecting the rights of your employees, customers and other stakeholders.

But it's not always obvious which compliance standards apply to your industry or specific business. While most businesses need to ensure they're following Occupational Safety and Health Administration standards for workplace safety, they must also meet Environmental Protection Agency regulations for protecting the environment. There are also

compliance requirements that have to do with the information you store and share. Here are three other compliance standards that you should know about if you're a business owner or leader.

Health Insurance Portability And Accountability Act (HIPAA)

You probably already know about HIPAA if you've been to any doctor's appointment in the past two decades. This law was enacted in 1996 to protect the privacy of individuals' personal health information and to ensure the security of that information. HIPAA only applies to "covered entities," which include health care providers, health plans and health care clearinghouses. These entities must comply with the rules set forth by HIPAA when handling protected health information. They must have the necessary administrative, technical and physical safeguards in place to ensure the confidentiality, integrity and availability of the information.

Continued on pg.2

Continued from pg.1

There's been confusion in the past relating to HIPAA, especially during the Covid-19 pandemic. When employers requested vaccination status from their employees, many claimed that this violated HIPAA, which is false. HIPAA only applies to covered entities. It's essential that you know the ins and outs of HIPAA if you work in the health care industry. Noncompliance can lead to fines, legal trouble and, in some cases, the loss of your license to practice medicine.

National Institute Of Standards And Technology (NIST)

The NIST is a nonregulatory agency of the United States Department of Commerce that develops and promotes standards, guidelines and best practices for ensuring the security and privacy of information systems. NIST compliance is vital for any organization that handles sensitive information, such as personal data, financial information or intellectual property. It becomes even more important for heavily regulated industries like health care, finance and government. NIST compliance can help organizations protect against cyberthreats, data breaches and other security incidents. It also helps organizations meet regulatory requirements set by HIPAA.

“By enforcing compliance, you’re working to promote ethical behavior while protecting the rights of your employees, customers and other stakeholders.”

When you adhere to NIST standards, you'll easily identify vulnerabilities, improve incident response plans and prioritize security measures. The NIST has created a helpful framework and various publications that provide guidelines for various systems and scenarios. If you're looking for a specific publication or are interested in other NIST resources, head to their website, [NIST.gov](https://www.nist.gov), for more information.

Cybersecurity Maturity Model Certification (CMMC)

The CMMC is a framework developed by the U.S. Department of Defense to assess and certify the cybersecurity practices of organizations that work with the DoD. This framework includes a set of controls and processes that organizations must implement to protect sensitive information and systems from cyberthreats. The CMMC framework applies to all organizations that work with the DoD and handle Controlled Unclassified Information. This often includes defense contractors, suppliers, subcontractors and organizations that provide services to the DoD, such as IT, logistics and engineering. Businesses that support the defense supply chain, including manufacturers, technology firms and professional service providers, also need to adhere to CMMC guidelines. Failure to achieve CMMC certification can result in being unable to bid on or win DoD contracts.

Compliance is something every business needs to be aware of, regardless of industry. Start by investigating HIPAA, NIST, and CMMC to see if their rules and regulations are applicable to your business, then look to other organizations. Doing so will help set your business up for success.

Do You Safeguard Your Company's Data And Your Customers' Private Information BETTER THAN Equifax, Yahoo And Target Did?

If the answer is “NO” – and let's be honest, the answer *is* no – you are leaving yourself and your company open to massive liability, *millions* in fines and lost business, lawsuits, theft and so much more.

Why? Because you are a hacker's #1 target. They know you have access to financials, employee records, company data and all that juicy customer information – social security numbers, credit card numbers, birth dates, home addresses, e-mails, etc.

Don't kid yourself. Cybercriminals and hackers will stop at NOTHING to steal your credentials. And once they have your password(s), it's only a matter of time before they destroy your business, scare away your customers and ruin your professional and personal life.

Why Not Take 4 Seconds Now To Protect Yourself, Protect Your Company And Protect Your Customers?

Our 100% FREE and 100% confidential, exclusive CEO Dark Web Scan is your first line of defense. To receive your report in just 24 hours, visit the link below and provide us with your name and company e-mail address. Hopefully it will be ALL CLEAR and you can breathe easy. If your company, your profits and your customers are AT RISK, we'll simply dig a little deeper to make sure you're protected.

Don't let this happen to you, your employees and your customers. *Reserve your exclusive CEO Dark Web Scan now!*

The \$43 Billion SCAM

Every year the FBI will post a public service announcement warning about Business Email Compromise (BEC). BEC is a sophisticated scam that targets both businesses and individuals who perform legitimate transfer-of-funds requests.

The scam is frequently carried out when an individual compromises

legitimate business or personal email accounts through social engineering or computer intrusion to conduct unauthorized transfers of funds.

The scam can also happen with employee faked direct deposit changes as well as faked requests for W-2 copies.

Although performing an audit of your M365 regularly is highly recommended, you can take steps right now to better protect against BEC theft. 1) Always confirm changes or transfers of a financial or PII nature by a pre-confirmed secondary method, like a phone call or text if the message came via email. 2) Confirm a written process to validate all transfers and educate all appropriate employees. 3) Have Secure ERP review your procedures for gaps. — R²

Impress Any CEO In 3 Easy Steps

You have a meeting scheduled with a CEO. Your goal is to convince them to either spend \$1 million on your product or service, hire you or invest in your idea. What's your strategy?

Many people "show up and throw up" and push a lot of information at the CEO, either verbally or by PowerPoint. A CEO will not hire you simply because you show that you know what you're talking about. Another flawed approach is to phrase your request as a "we ought to." CEOs don't decide to do things just because other people say they should do something. Worse yet is when people only talk about why they want something to happen, ignoring the CEO's wishes, concerns and perspective.

So, how do you successfully convince a CEO?

1. **Seek first to understand the CEO's perspective.** That is Stephen Covey's advice. It needs no further explanation. Your first step in discussing a topic with a CEO is to put all your energy into asking probing questions, listening and learning what the CEO thinks about a topic and why. Forget about your agenda or your needs for a moment.
2. **Reflect the CEO's perspective to their satisfaction.** This step is tricky. Most people cannot objectively reflect or restate another person's perspective about a topic without putting their own slant on it. I first learned this step during my psychology Ph.D. training during a class on conflict resolution. At this step, you must restate the CEO's perspective on the topic, simply and without putting words in their mouth or trying to spin it in your favor. You know you

have succeeded once the CEO says the magic word, "exactly." This means that the CEO believes you understand their perspective. Then, and only then, have you earned permission to move to the final step.

3. **Propose your idea as a way to help the CEO achieve their goals.** The mindset for this step is not that you are about to trick or fool a CEO into doing something that's not good for them. Your mindset is that you are about to convince a CEO to do something that *is* good for them. (And by the way, if what you are about to propose is not in the CEO's best interests, then don't propose it!) A simple way to present your idea is to say, "Your goals are X, your concerns are Y, so I propose you do Z."

Contrary to popular belief, great ideas don't sell themselves. It takes a skillful leader to successfully convince a CEO, and now you have the tools to do so.

Dr. Geoff Smart is chairman & founder of ghSMART, a leadership consulting firm that exists to help leaders amplify their positive impact on the world. Dr. Smart and his firm have published multiple New York Times bestsellers. He stays active in his community and has advised many government officials.

■ Are You Addicted To Work? 2 Ways To Help Take Your Life Back

Many business owners and entrepreneurs will dedicate their entire lives to their businesses to ensure success. They'll regularly work 60- to 80-hour workweeks, sacrificing their free time to focus on their business. In many ways, it's an addiction that can be incredibly damaging to an individual's mental health. Recent studies have shown that those who work too much are more susceptible to burnout, chronic stress and strained relationships. If you find yourself spending too much time in your business, there are a few things you can do to fight your work addiction.

Reassess Your Goals.

Why are you working so hard? What do you want to achieve? Is it actually possible, or are you working yourself into the ground

for an unobtainable dream? These are questions you need to ask yourself if you feel you're working too much. Reflect on your goals and determine if they're still what you want for yourself and the business. If not, or if your goals are not feasible, it's time to readjust and create new ones.

Trim Your Task List.

Working too long every day usually stems from trying to accomplish too much daily. Take a step back and think about what you can truly accomplish in 8-10 hours. Don't put too much on your plate because you'll feel like you need to complete everything before you head home. Delegate the less important tasks if you have a team supporting you. You don't have to do everything in one day on your own.

■ Why Aren't My Employees Reading My E-mails?

How often do you send out e-mails to your employees? Have you ever talked with an employee about prior communication you sent, but they tripped their way through the conversation? It happens all the time across various industries. Employees don't always read communications from upper management, and you're left trying to figure out why. Sure, you could blame it on the employees just not wanting to read, but there's often a deeper issue involved. Here are a few reasons your employees are ignoring your e-mails.

- **Improper Timing:** Your employees are less likely to read your e-mails if you send them out at the end of the day.
- **Information Overload:** E-mails with too much information cause your employees to take too much time from their other tasks. Only put the information that's absolutely necessary in your e-mails.
- **Unclear Expectations:** Are your employees required to read your e-mails? They might just ignore the e-mails if they don't think they pertain to their job or provide relevant information.

"The computer's acting funny."
